TECHNICAL SKILLS

Back-End

Django

DRF

Spring Boot

Express.js

Symfony

.NET

Front-End

React

Next.js

Angular

TypeScript

Tailwind CSS

Framer Motion

DevOps

Docker

Jenkins

GitLab CI/CD

GitHub

SonarQube

Nexus

Prometheus

Grafana

Databases

PostgreSQL

pgvector

MySQL

Redis

Security

JWT

RBAC

WebSockets

python-magic

Tools & Integrations

Postman

Swagger

Jira / Scrum

Supabase

Stripe

Celery

EDUCATION

National Engineering Diploma

Computer Science — Software Engineering

ESPRIT, Tunis

2021 – 2025

Bachelor's Degree

Electrical Engineering (Electronics)

ISET Nabeul

2018 – 2021

PROFILE

Full-Stack Engineer specializing in **Django, Express.js & React/Next.js**, with solid DevOps capabilities (Docker, Jenkins, CI/CD). Graduated engineer (ESPRIT 2025) with proven delivery of **production applications** for real clients. Comfortable across the full lifecycle — secure REST APIs, reactive front-end interfaces, containerized deployments, and real-time monitoring. Proficient with **AI-powered developer tools** (Claude Code, Cursor) including their sub-agents and skill systems to accelerate development workflows. Seeking a Full-Stack role (local or remote) where technical rigor and shipped products make the difference.

PROFESSIONAL EXPERIENCE

Haqqi

Lead Backend Engineer & Solutions Architect

03/2026 – Present · Freelance

- Designed a distributed architecture decoupling data persistence (Django) from business logic via **Celery/Redis** task queue, enabling asynchronous and scalable processing.
- Built a **collective fraud detection engine** using PostgreSQL pgvector with HNSW spatial indexing for high-performance similarity search at scale.
- Implemented **asynchronous multimedia ingestion** with binary validation via **python-magic** to prevent injection attacks, ensuring reliable and secure file handling.

Stack: Django · Celery · Redis · PostgreSQL (pgvector/HNSW) · Docker

Domus Link

Full-Stack Developer & Solutions Architect

11/2025 – 01/2026 · Freelance

- Delivered and launched a **3D-first real estate platform** (Next.js / Supabase) currently serving real users, with performance optimization via Framer Motion for smooth Web Vitals.
- Implemented **full trilingual support (FR / EN / AR)** with bidirectional layout isolation (RTL/LTR), making the platform accessible across North Africa and Europe.
- Managed the **complete client consultation lifecycle** — from initial request through quote generation and project invoicing — as well as end-to-end product order tracking from order placement to delivery and payment confirmation.
- Hardened **user input security** with strict form validation logic, surfacing clear and field-specific error pop-ups for every invalid entry to prevent data integrity issues.

Stack: Next.js · Supabase · PostgreSQL · Stripe · Framer Motion · Tailwind CSS

InTech Solutions

Software Engineer — Modular ERP System

02/2025 – 08/2025 · Final Year Project

- Developed a **secure Django REST API** with JWT authentication and role-based access control (RBAC), automating the full sales cycle (quotation → invoicing) across multiple ERP modules.
- Built **real-time inventory management** with WebSocket integration and a CRM module for centralized client data — reducing manual reconciliation effort.
- Led delivery across **6 Scrum sprints** (Jira); built a full CI/CD pipeline: Maven build → JUnit tests → SonarQube quality gate → Nexus artifact storage → Docker image → Jenkins deployment.

Stack: Django · React (TypeScript / Tailwind) · PostgreSQL · Docker · GitLab · Jenkins · SonarQube

BF Production

Web Engineer — E-Commerce Platform (Fast-Food)

06/2024 – 08/2024 · Engineering Internship

- Developed a **high-volume e-commerce platform** for fast-food ordering with real-time ingredient stock tracking automatically updated after every sale.
- Built a reactive product customization interface with live delivery status tracking for end users.

Stack: Express.js · React (JavaScript) · PostgreSQL

ACADEMIC PROJECTS

DevOps Project — Full CI/CD Pipeline

End-to-end pipeline implementation: Maven build → JUnit tests → SonarQube static analysis → Nexus versioning → Jenkins orchestration → Prometheus/Grafana monitoring stack for high availability.

09/2024 – 12/2024

Welcome To Esprit — Recruitment Portal

Built a full recruitment cycle management portal (Spring Boot / Angular / MySQL) with an intelligent appointment scheduling algorithm between students and evaluators, and RESTful APIs for inter-module communication.

01/2023 – 03/2023
